

## Winterizing Pipes and Fixtures

During our colder Texas months, we recommend that you winterize your home by protecting pipes and fixtures from freezing. Fixtures inside your home that are located on exterior walls should be dripped and cabinet doors opened to help prevent freezing from occurring. Exterior pipes exposed to the weather should be insulated properly.

Non-Insulated Hose Bibs can Freeze

Insulate Exterior Hose Bibs

Open Sink Cabinet Doors on Exterior Walls

Care should be given not to expose chemicals to children or to pets

Insulate Irrigation Pipes

Non-Insulated Pipes can Freeze and Burst

Drip Interior fixtures on Exterior Walls
